

1. Draw a simple diagram (on paper or using an online tool like draw.io) showing how your phone connects to Instagram's servers from your home WiFi, including the ISP and at least two Wide Area Network (WAN) devices (like routers or switches) in the path.

**Answer :**

**2. Create a table listing three types of WAN technologies (such as MPLS, Leased Line, and Broadband Internet) and compare them based on speed, cost, and where you might see them used in real life (e.g., Zomato office, IRCTC ticketing, your home).**

**Answer :**

| WAN Technology     | Speed          | Cost           | Where Used                                           |
|--------------------|----------------|----------------|------------------------------------------------------|
| MPLS               | Fast           | Expensive      | Large company offices like Zomato                    |
| Leased Line        | Very Fast      | Very Expensive | Important services like IRCTC ticket booking systems |
| Broadband Internet | Normal to Fast | Cheap          | Homes, schools, and small offices                    |

**3. Research and write a short explanation of how a VPN (Virtual Private Network) uses WANs to let you access apps like Spotify or YouTube securely from a public WiFi at a coffee shop.**

**Answer :** A VPN (Virtual Private Network) creates a secure private tunnel over the public Internet (WAN). For example, when using free WiFi at a coffee shop to access YouTube or Spotify, the VPN encrypts your data so that other people cannot see your information. This helps keep your browsing and login details safe while using public WiFi.

**4. Imagine Flipkart wants to connect its warehouses in Ahmedabad, Mumbai, and Delhi. Suggest which WAN technology would be best for them and justify your answer with two reasons.**

**Answer :** For connecting Flipkart warehouses in Ahmedabad, Mumbai, and Delhi, MPLS would be the best WAN technology.

**Reasons:**

1. It provides a safe and secure connection between all warehouses.
2. It is fast and reliable, so data can be shared quickly without many interruptions.

**Conclusion:**

MPLS is a good option for Flipkart because it helps different warehouses stay connected securely and efficiently.
